

Tasker special Video cables

Tasker is always working really hard to improve its video cables quality!

Our Italian firma started to develop video cables in '70s with the production of the standard version of **RG59 Mil.**:

During the following years we gathered all our forces to refine this cable introducing new and improved versions, from the **RG59 Flex** to the latest new entry **RG59 AR**, advised for underground installations also in presence of rodents and very appreciated from our customers.

Anyhow, in the 21 century standard definition is not enough!

For this reason tasker skilled technical dept. created HD-SDI cables able to deliver a 3G Video signal from 70 to 200 meters without amplifying.

We can mention among the others our Tasker **T42 PUR**, a double braided cable suitable for outdoor installation and water resistant, or our Tasker **TSK1077** line in Low Smoke Zero Halogen for public and outdoor limited installations.

But our latest biggest success in the video field is surely our new **TSK1060 Super**, an HDMI 2.0 4K cable with a small diameter of 8,50 mm able to provide a 3D 4K signal above 35 meters!

In the video field, as well as in the audio one, tasker constantly strives to research and develop new products and materials, also creating custom productions, in order to propose specific solutions for each kind of customer and to anticipate upcoming technologies meeting the needs of today and tomorrow.
