Ecler goes wireless

WiSpeak

AS THE trend for professional audio continues, Ecler's WiSpeak, described by 'a whole new dimension' and fast professional audio installation, boasts stable wireless coverage and a quick solution for users to share audio content. Core master unit to the receiver units – two model loudspeakers featuring 3-inch lamp style, respectively 500m² coverage per channel. Also incorporates the WiSpeak application that is said of the installation in the The HUB1616 and HUB1617 are Ecler's latest digital that incorporate DSP with delay, graphic EQ and frequency response. Both several control possibilities front panel, Ecler pilot with graphics panels are for third-party devices. provide single zone control selection, three-band control.

Designed for both mobile installations, the LAB11 compact PA system for a fast and easy installation with long-lasting performance consists of two subwoofers LAB11-SB18p (powered,

High tech for the new decade

AS WE start a new decade, Tasker is focusing on the development of single cables that are able to carry out multiple services at once. Cat-7 cables are a significant example of this, where only one cable is needed to carry audio, video and signal data at very high speeds.

For this reason, Tasker has released a series of Komby cables with Cat-7, designed for mobile laying. Tasker's own C747 contains four Cat-7 S/FTP stranded cables that, thanks to their soft PVC sheath and an external diameter of just 19mm,

are said to be extremely soft and flexible. Tasker reports that these features make this cable ideal for both mobile laying and the realisation of assembled cables to be used on cable drums.

Tasker has also added four high-shielded DMX cables plus a 3x2.5mm² power cable in the form of the C744. The manufacturer describes the C744 as a complex cable suitable for many applications but mostly for assembled cables for live events.

Tasker also offers smaller siblings for the C744: the C743 is contained in a single soft PVC sheath with three Cat-7 S/FTPs, two DMXs and one 3x2.5mm² power cable; the C735 Super is composed of two Cat-7 cables and one 3x2.5mm² power cable; and the C734 Super comes with one Cat-7 S/FTP and one 3x1.5mm² power cable. All the cables can be widely used for high-speed data transmission, particularly in data centres and broadcast studios, and can be manufactured on demand with LSZH or PUR sheaths.

four twisted pairs and AWG 23/1 solid conductors dual shielding (S/FTP) to protect against electromagnetic interference. The CP64EE is built with Neutrik's Cat-6A etherCON connectors

in Klotz's other cables, includes relief grips with a loop. It is compatible and can be used AVB, AES50 and MADI over CAT 5.

Micro d

DEFENDER, A brand c has announced the re cable protectors. These LaserGrip surface that can reportedly withstand up to two tons per 7.8 x 7.8 inches and are made from recycled in-house materials.

They can be adapted to any location such as end ramps or bends and are equipped with patented hinges.

Alongside the release of Micro 2, Adam Hall has launched a new website to provide users and potential customers with the key facts of each of Defender's products.
